

INTERLAYER Foil is an unreinforced waterproofing foil based on polyethylene (LDPE, HDPE) designed for versatile applications. It is ideal for separating and protecting individual parts in transport packaging or on pallets, and can also be used as an anti-slip layer. The foil serves as an effective alternative to corrugated cardboard, carton, polystyrene foam, as well as bubble and foam PE films.

Interlayer materials are intended to fill gaps between goods, between goods and the wall of the packaging (or transport vehicle), or between the cargo and securing devices such as strapping, pallets, etc. They can also be used as interlayers between individual layers of goods (cargo).

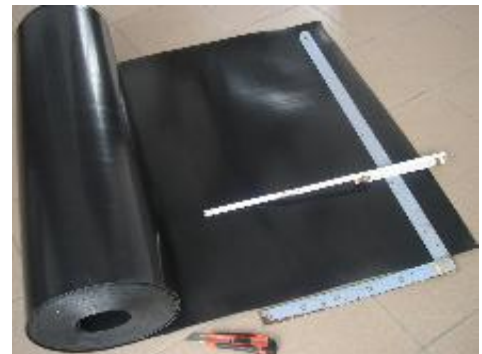

### APPLICATIONS

- Pallet spacers - to separate and protect individual parts in shipping containers or on pallets
- Plastic spacers - thanks to the ability to shape the foil or sheet exactly according to the product, perfect fixation of semi-finished product or final part can be achieved.

### FEATURES

Material		polyethylene (LDPE, HDPE)
Colour		black, coloured
Surface		smooth x patterned
Cut-to-size	thickness	1.0 – 3.0 mm
	width	160 – 1,300 mm
	length	300 – 2,500 mm
Foil	thickness	1.0 – 2.0 mm
	width	1,000 – 1,300 mm
	length	68, 52, 37, 28 m
Temperature range of use		-40 °C to +35 °C
