

Plastic waste processing:

Fatra, a.s. is a traditional Czech company that processes internal and external plastic waste and technologically recoverable material on its Starlinger recycling line as part of circularity. We have also been offering regranulation and recycling services to our business partners for a long time.

We also purchase plastic waste.

We offer:

- Stable production process with its continuous control.
- Plastic waste and raw materials processing from PP, PE, PP/PE, EVAC materials.
- Sales of re-granulates and recyclates.
- Optional recyclate colouring, or adding additives directly in the production.
- Homogenization of materials in silos.
- Output laboratory report.
- Laser filtration.
- Double vacuum degassing of the melt.
- Individual approach to each order.

We buy out PP, PE, PP/PE and EVAC materials in all the displayed forms:

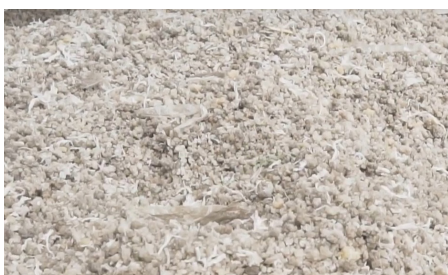

Foils in rolls

Foils compressed into bales

Inlets, splashes

Reginds, agglomerates

Cakes

Non-conforming parts

Reuse facility are entered in the register maintained by the Ministry of the Environment, under Plant No. IČZZ00744.

Re-granulate / recycled production offer:

- We produce PE, PP, PP/PE re-granulate and recycle injection moulding, blow moulding, and extrusion.
- Based on customers' requirements, we can produce re-granulate with desired melt flow index in various colours, including re-granulate containing filling compound.
- We process internal and external waste during production.

Technologies	Products	Re-granulate
Extrusion	Hose-pipes / hoses, pipes Cable sheathing Profiles of various shapes Extruded foils and sheets	(LD/HD) PE PP PP / PE
Injection moulding	Various injection-moulded products Plastic crates, boxes Floor tiles	PP PP / PE
Blow moulding	Blow-moulded foils Garbage bags	(LD/HD) PE

Packaging:

Packaging according to customer requirements – octabins and bigbags from 700 kg to 1100 kg, weighed on digital scales.

Please do not hesitate to contact us for more information or a specific offer.
